about us.

Energy Lighting Design Srl is one of the leading agencies in the lighting, electrical materials, and furniture sectors, operating primarily in Tuscany and Umbria. We collaborate with architects, landscape designers, urban planners, engineers, surveyors, and public and private organizations who rely on us for high-quality brands and products, as well as continuous technological innovation across all our services.

industrial.

lighting management
and emergency lighting.

interiors - residential.

We design lighting and interiors as an integrated whole.
We collaborate with design studios to develop functional, balanced spaces that are coherent with the overall concept. We define layouts, lighting distribution and furnishing solutions based on functions, materials and proportions, ensuring visual comfort, perceptual quality and compliance with regulatory requirements. Light interacts with architecture and furnishings to create visual hierarchies, depth and different usage scenarios, enhancing surfaces and details.
We follow every stage, from concept to final coordination, ensuring design consistency and precision.

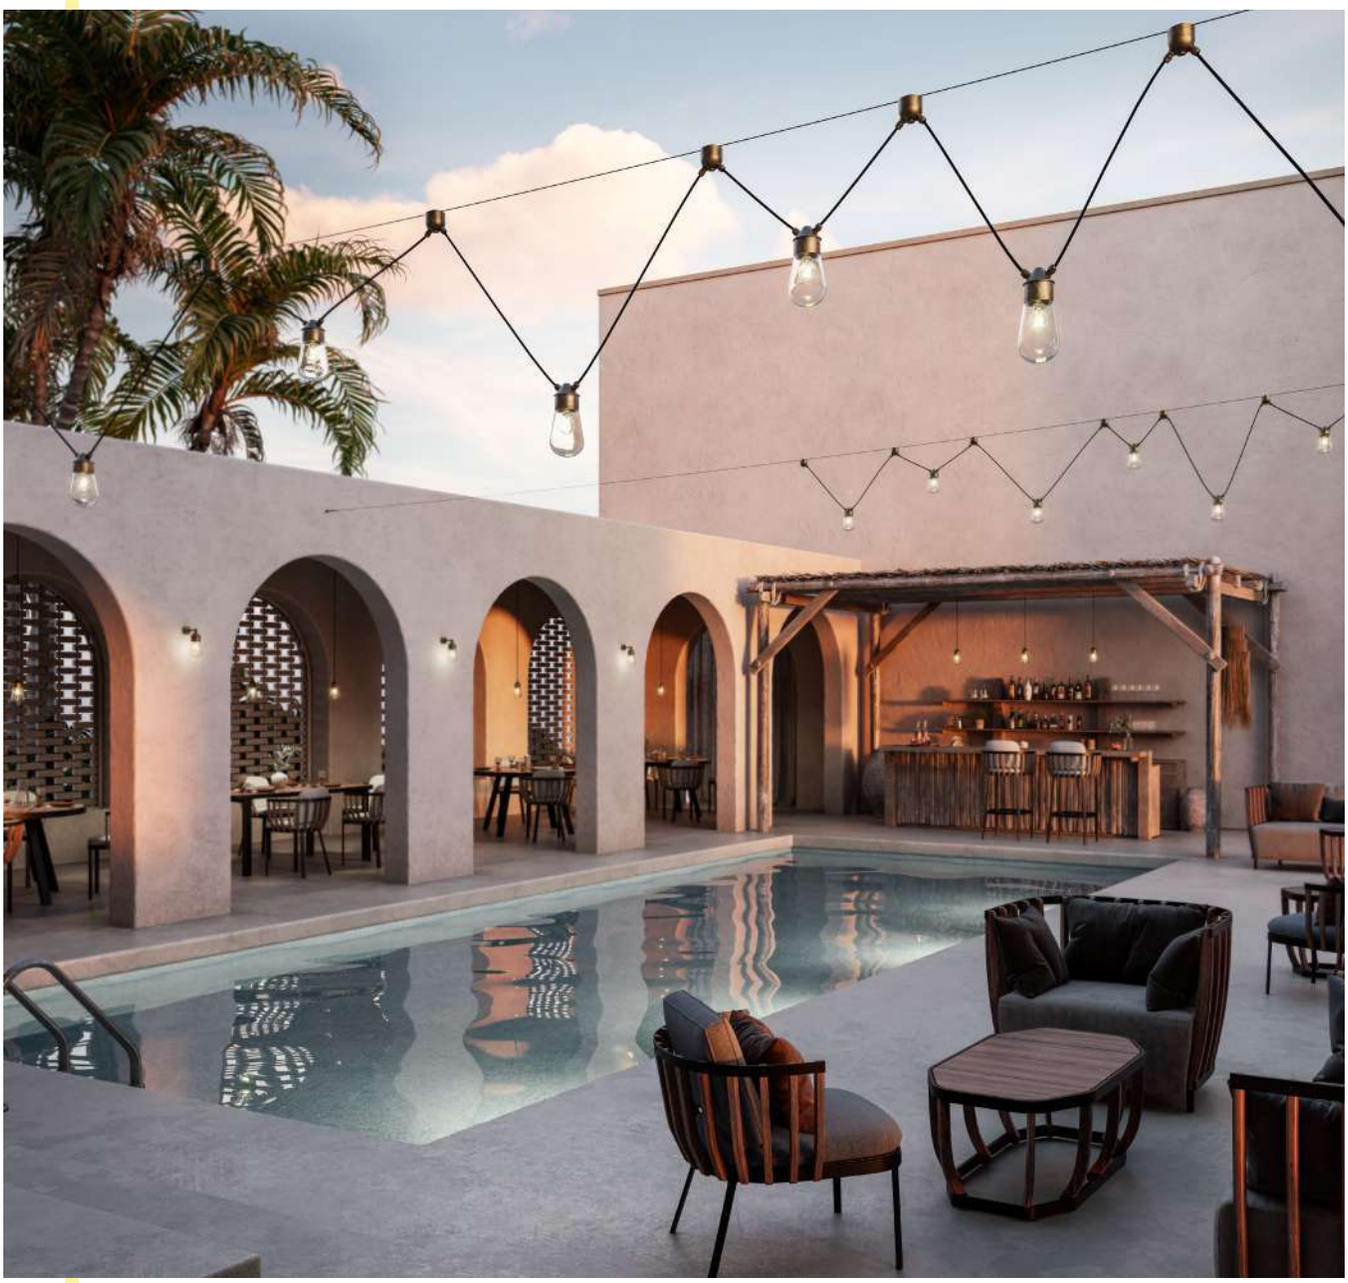

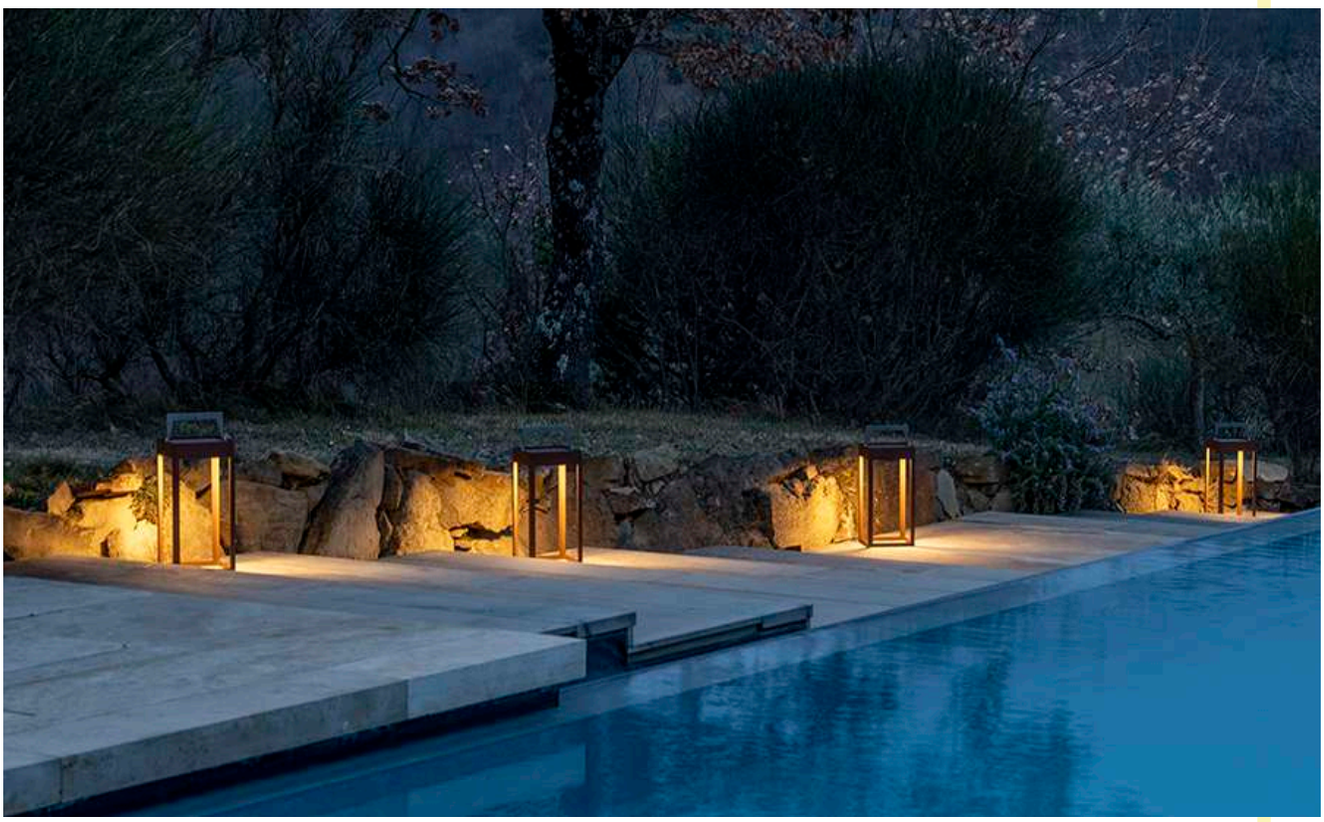

exteriors.

We design light for outdoor spaces as an architectural element.
We work alongside designers and technical professionals to develop solutions that are coherent with the concept and context, carefully defining every aspect: layout, illuminance levels, colour temperature and fixture positioning.
Every choice is guided by visual comfort, glare control and energy efficiency, with constant attention to enhancing volumes, surfaces and outdoor furnishings.
We follow the project through every stage, from initial consultancy to final adjustments, ensuring consistency and quality throughout the lighting design.

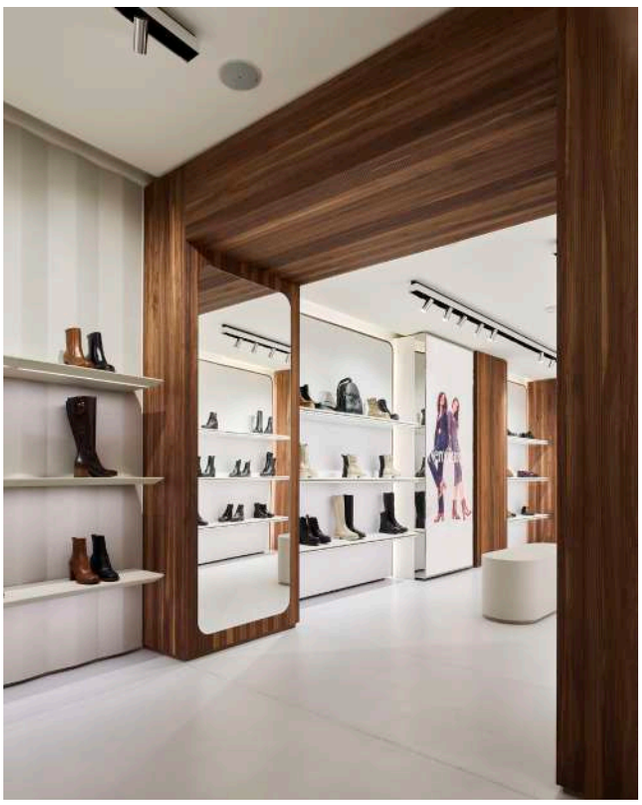

retail.

We design lighting for retail spaces as an integral part of the shopping experience. We work alongside designers and technical professionals to create environments consistent with the brand, layout and display strategy.
We develop lighting strategies based on customer flows, functions and products, defining levels, accents, contrasts and colour temperatures to ensure visibility, readability and visual comfort. Light becomes a communication tool: guiding customers, enhancing displays and integrating with furnishings and custom solutions, with attention to colour rendering, glare control and flexibility.
We follow every stage of the design process, ensuring consistency, efficiency and lasting quality.

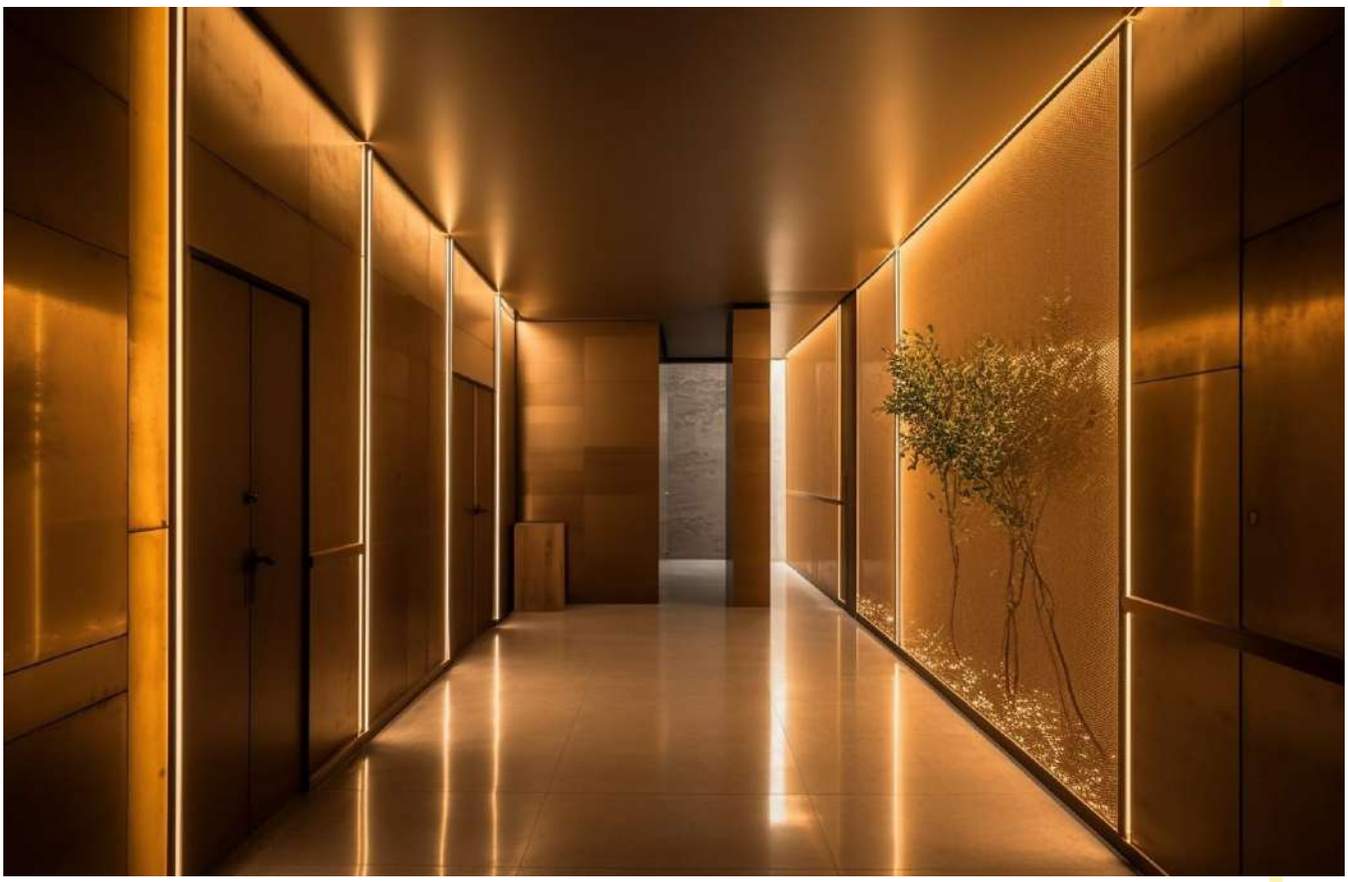

hospitality.

We design lighting and furnishings for the hospitality sector, creating environments dedicated to welcoming, wellbeing and the guest experience.
We develop solutions based on functions, length of stay and different areas — lobbies, rooms, dining areas and common spaces — defining lighting scenarios, levels, colour temperatures and control systems.
Lighting and furnishings work together to create atmosphere, comfort and identity, enhancing materials and architecture.
We follow every stage of the project, ensuring consistency, quality and lasting reliability.

educational and tertiary facilities.

We design lighting for educational and tertiary facilities, developing efficient, high-performance solutions tailored to the functions of each space.
We analyse the intended use and requirements of different areas — classrooms, offices and common spaces — in compliance with current regulations, with a focus on user wellbeing and energy efficiency.
We define layouts, lighting distribution and control systems, from concept to final verification, ensuring quality, reliability and flexibility over time.

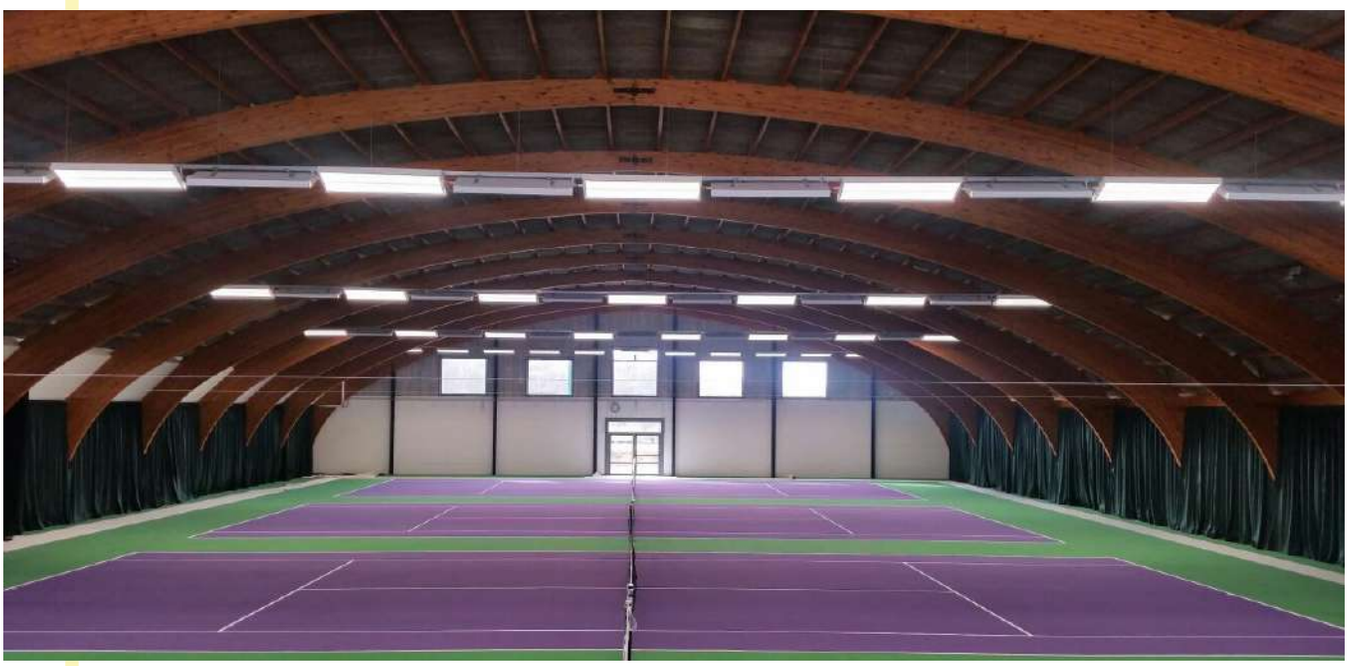

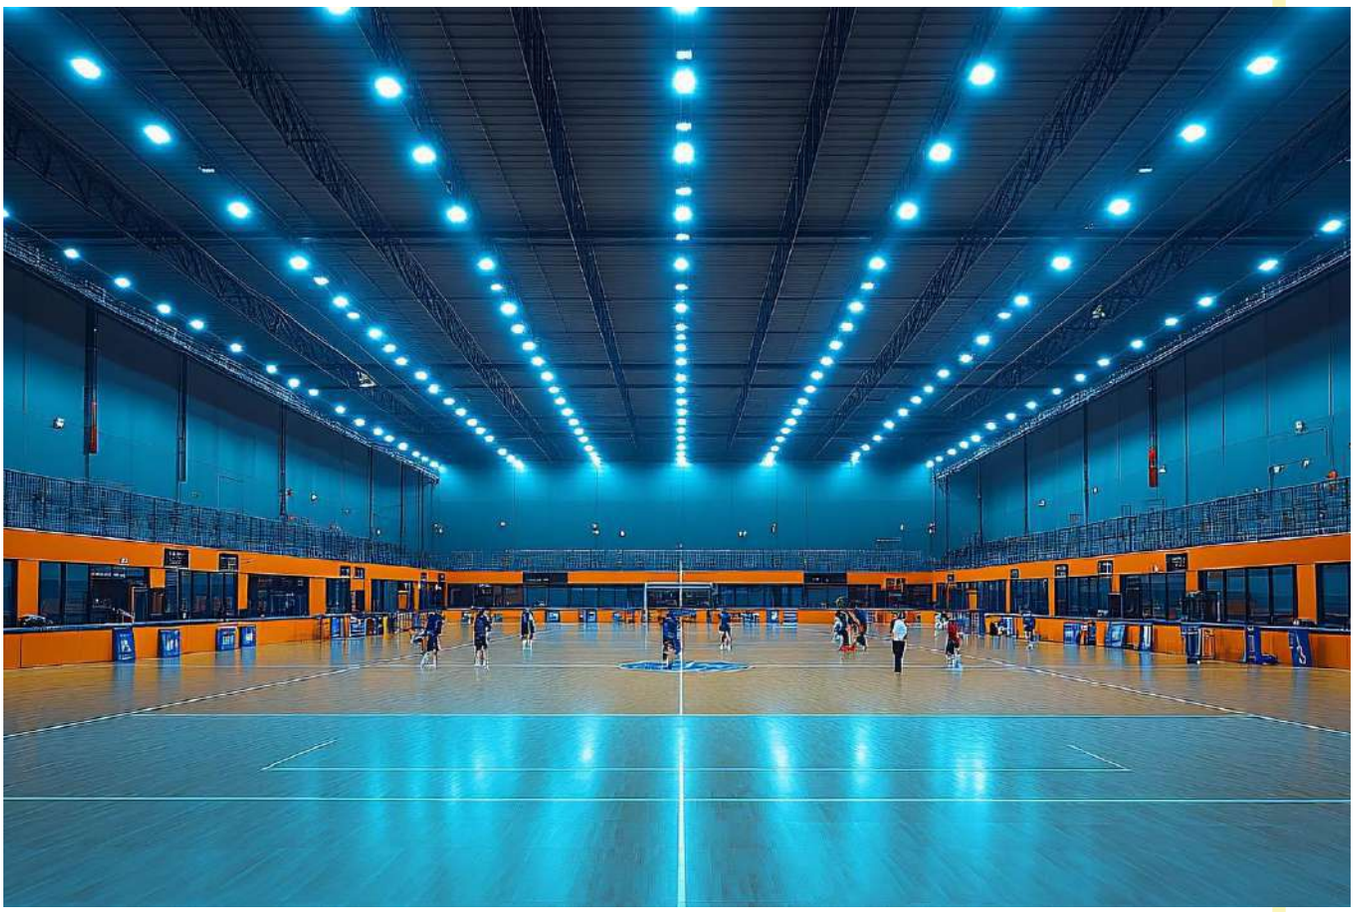

sports facilities.

We design lighting for indoor and outdoor sports facilities, developing solutions tailored to each discipline and usage scenario.
We define illuminance levels, uniformity and glare control, ensuring high performance, colour rendering and compatibility with television broadcasting.
We support every stage, from verification to installation and final adjustments, ensuring real and measurable results.

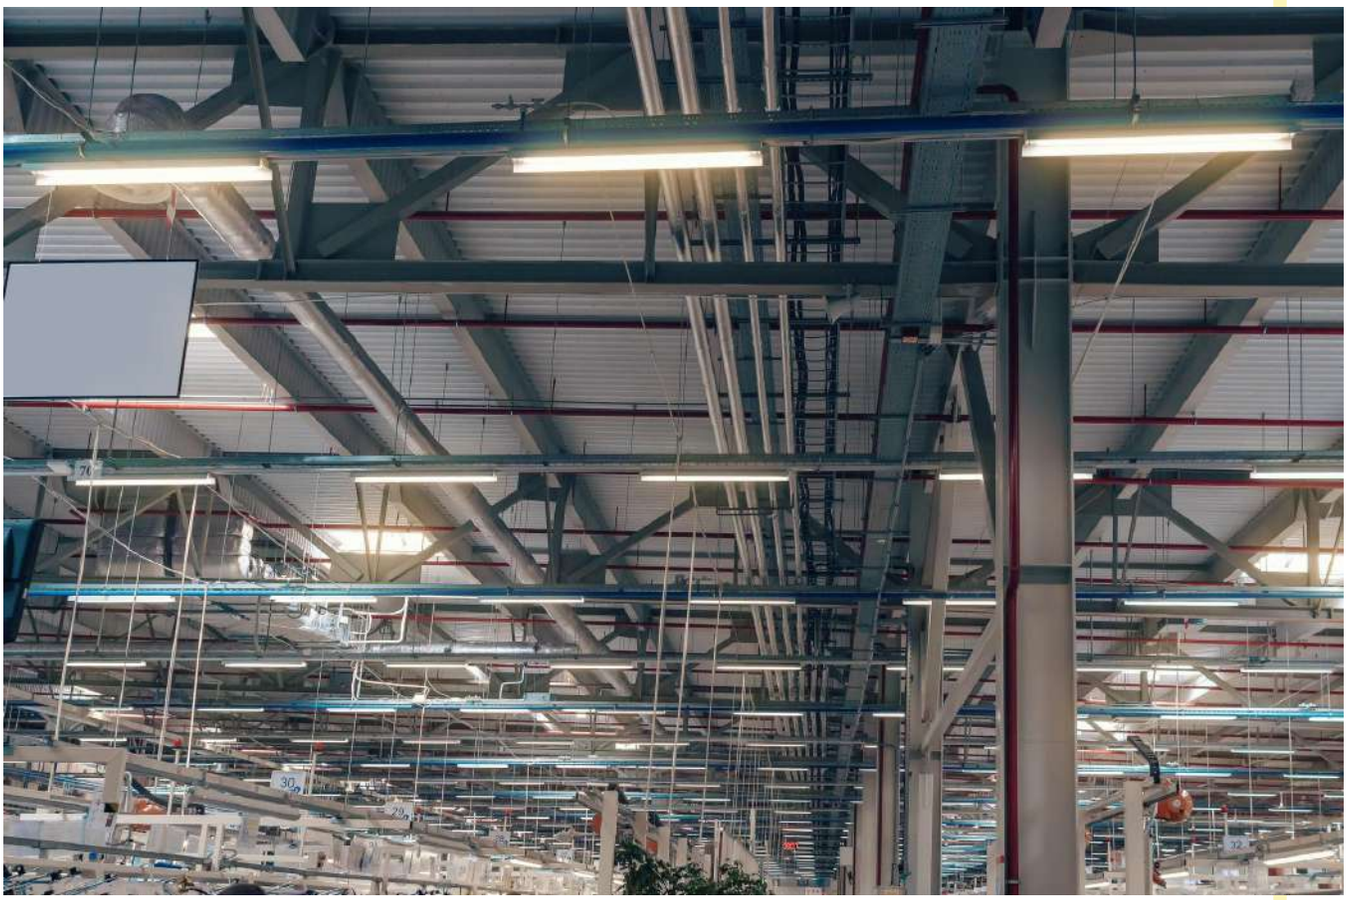

industrial.

We design lighting for industrial spaces, developing efficient, safe solutions that meet operational requirements.
We analyse processes and layouts to define illuminance levels, uniformity, glare control and colour rendering, ensuring safety, visual comfort and operational continuity.
We define technical criteria, positioning and control systems, supporting the project through to final verification to ensure reliable performance over time.

lighting management and emergency lighting.

Lighting management is essential to ensure comfort, safety and energy efficiency in residential, commercial and industrial environments.
We design intelligent control systems for general and emergency lighting, with automatic dimming, scheduled management and integration with home automation and building automation systems.
Our solutions ensure reliability, low energy consumption, high-efficiency LED technology and maximum safety in the event of a power outage, improving functionality, sustainability and the overall quality of spaces.
